

RR

Infrastructure

Experience

RR has been a member of NeTeam Corporation either in a consulting capacity or as an employee since it was founded in 1998. For the past 20 years, RR has been in the network and wireless solutions market with a current focus on VoIP technology. Working first for a computer reseller in Northeast Ohio, RR installed and managed thousands of network implementations.

While with his previous employer, RR was with the healthcare technology group. This group was formed to build and support the wireless hospital. A concept of true mobile patient care that still exists in the NeTeam culture. Support and maintenance were needed for these large wireless deployments and RR led the team that supported all open protocols. He then moved to a startup research group that was focused on a voice product that leveraged open standards. SIP and VoIP were selected with a gateway to the H.323 protocol for a small enterprise PBX system marketed with ease of use. RR then joined NeTeam as a full-time employee currently focusing on voice systems and voice over wireless.

Experience Highlights

- 20 years experience in networking and computer systems
- 10+ years experience in wireless data systems
- Original network testing of Telesystems Spread Spectrum Radios (now Cisco/Aironet)
- Thousands of network installs in banking, energy and entertainment sectors
- Part of healthcare technology group which pioneered the wireless hospital concept
- Managed teams for third level support of both wired and wireless implementations
- Vice President Technology for a research group focused on VoIP and mobile solutions
- Patents awarded for VoIP device
