

NeTeam is a wireless networking solutions provider. Our expertise in mobilizing mission-critical information eliminates errors, reduces operating costs, and raises the bottom line.

Our design engineers have unparalleled expertise in the integration of advanced data, voice, video and security technologies, enabling the most efficient and cost effective wireless networks in the industry.

These powerful information management systems provide unequalled performance and reliability and support a myriad of enterprising applications in healthcare, education, financial services, and more. We are experts in handling the details that make the difference in how your wireless network performs over time.

A heritage rich in wireless innovation

NeTeam was founded by some of the key visionaries and technologists who helped to launch the wireless revolution of the 1980s. We hail from pioneering enterprises like Aironet (now owned by Cisco Systems) who developed the first commercial spread spectrum wireless network and Telxon Corporation who designed and produced the world's first wireless handheld computer.

Practice makes perfect

We offer the benefits of our collaborative relationships with our clients – some of the world's most prominent organizations. Our expertise in the healthcare field comes from working with top-tier facilities like the Cleveland Clinic, Washington Hospital Center, and Baptist Health. We were well educated in the wireless campus concept through hands-on experience at Vanderbilt, Cleveland State, and Case Western Reserve universities. Our head for business comes right from the trading floor of the N.Y. Stock Exchange where we secured their wireless information network.

Guilty by association

It's true – we only partner with the best. Our design engineers only specify and integrate cutting edge technology from the industry's elite: Cisco Systems, Vocera, BlueSocket, and Wavelink to mention a few. To ensure that we are always on top of our game, we hold a voting status on several IEEE 802.11 wireless standards committees. If it's the latest innovation in wireless, we're on it.

Today, a NeTeam wireless information management system is more than a data communication pipeline. It serves as a valuable business tool for improving productivity, reducing operating costs, and maintaining a profitable operation.

A sampling of our distinguished clients.

HEALTHCARE

- Baptist Health South Florida
- Catholic Healthcare Partners
- Cleveland Clinic Foundation
- Memorial Healthcare System
- Washington Hospital Center

HIGHER EDUCATION

- Case Western Reserve University
- Cleveland State University
- Florida International University
- University of Akron
- Vanderbilt University

FINANCIAL SERVICES

- Bear Stearns
- Key Corporation
- N.Y. Mercantile Exchange (NYMEX)
- N.Y. Stock Exchange (NYSE)
- N.Y. Board of Trade (NYBOT)
